

Online privacy and safety

Common EU rules guarantee a high standard of privacy online. The EU is committed to ensuring citizens, and particularly children, are safe online.

ePrivacy

Each time we go online, we are entrusting our personal information to the websites we use and to the companies that provide us with the Internet. This information can range from our names and contact details, to our likes and dislikes, to our credit card information.

EU-wide rules can help protect our data when we browse the Internet. The EU is currently discussing new privacy rules that build trust and security online for the Digital Decade. The rules will give us greater control over our data and devices. And, they will update current ePrivacy rules to cover new forms of communication online.

New ePrivacy rules go hand in hand with other EU initiatives to ensure our privacy online. For example, the EU's General Data Protection Regulation (GDPR) ensures our personal data can only be gathered under strict conditions and for legitimate purposes.

A better Internet for children

Around one in three Internet users is a child. Children are accessing content online at younger and

younger ages.

While there are excellent opportunities for learning and creativity online, there are also risks. Children may be exposed to fake news, cyberbullying, privacy breaches, harmful content and grooming.

The EU launched its Strategy for a Better Internet for Children with the aim of introducing specific measures for young people online.

To create a better internet for children, the Commission has set goals to:

- encourage more creative and educational content for children
- foster awareness and empowerment through digital literacy and online safety courses
- create a safe environment through age appropriate privacy settings and parental controls
- tackle child sexual abuse and exploitation online

Trade and Technology Council: Inaugural meeting
agrees on important deliverables and outlines
areas for future EU-US cooperation

At the first meeting of the Trade and Technology
Council (TTC) in Pittsburgh, the EU and the US
agreed on concrete deliverables and outlined the

future scope of work. Notably, the EU and the US committed to cooperating closely on shared priorities such as export controls, foreign investment screening, critical and emerging technology standards including Artificial Intelligence, and secure supply chains including on semiconductors. They also agreed to work together on important global trade issues, such as the challenges posed by non-market economies and trade-related climate and environment

EU Cybersecurity: Commission proposes a Joint Cyber Unit to step up response to large-scale security incidents

The Commission has laid out a vision to build a new Joint Cyber Unit to tackle the rising number of serious cyber incidents impacting public services, as well as the life of businesses and citizens across the European Union. Advanced and coordinated responses in the field of cybersecurity have become increasingly necessary, as cyberattacks grow in number, scale and consequences, impacting heavily our security. All relevant actors in the EU need to be prepared to respond collectively and exchange relevant information on a 'need to share', rather than only 'need to know', basis.
