

The European Commission and the European Blockchain Partnership support the INATBA COVID Task Force

The European Commission and the European Blockchain Partnership support blockchain initiatives that can help address challenges posed by the Coronavirus outbreak.

The International Association of Trusted Blockchain Applications (INATBA) launches the COVID-19 Solutions Task Force, which aims to build a database of the blockchain solutions that address challenges caused by the Coronavirus outbreak.

INATBA

The initiative of COVID-19 Task Force will identify and catalogue blockchain related solutions that can assist with the governmental, social and commercial challenges caused by the Coronavirus outbreak. INATBA, which is the industrial association of 170+ and growing global membership with its Government Advisory Body, convenes key players in the global blockchain ecosystem to address deployable technology solutions with support on research and analytics by University College London (UCL). By building cooperation among public and private institutions, the initiative will establish the state of readiness of each solution, identify any additional work required to make the solutions ready for market or fit to solve the identified issues.

The European Commission and the European Blockchain Partnership will work closely with the initiative in identifying the challenges which can be addressed through the application of blockchain technology.
