

Webinar on healthcare robotics organised by the H2020 DIH-HERO project

- 26 March 2020

DIH-HERO has made a first version of a service directory about healthcare robotics, which helps identify the different services offered by companies in the DIH-HERO network that could add value in the creation of novel healthcare robotics solutions.

DIH-HERO is an independent platform which connects Digital Innovation Hubs across Europe to create a sustaining network for all those who are active in the healthcare robotics sector.

The primary objective of DIH-HERO is to accelerate innovation in robotics for healthcare. To connect innovators, providers, businesses, users and politicians, DIH-HERO will establish an open online portal offering multiple services facilitating collaboration on various innovations, emphasizing the sharing of best practice and enhancing the delivery of innovation throughout the value chain. DIH-HERO especially focuses on supporting small and medium-sized enterprises in maximizing their impact and reducing time-to-market. By connecting businesses and healthcare stakeholders, DIH-HERO enables them to develop innovative products and services that are better fitted to the needs of the healthcare systems across Europe. Furthermore, DIH-HERO will engage in necessary standardization for robotics in healthcare, including ethical, legal and societal issues.

The webinar will present the **services that the project offers** and will also give an overview of the open calls organised by the project. There will also be room for **feedback to the project**. DIH-HERO has made a first version of a service directory about healthcare robotics that can be found at <https://services.dih-hero.eu>. This service directory helps you identify the different services offered by companies in the DIH-HERO network that could add value in the creation of novel healthcare robotics solutions.

Agenda

- Short overview of DIH-HERO
- Presentation of the service that DIH-HERO wants to offer
- Go into more detail on some service examples
- Short overview of relevant standards for healthcare robotics
- Info on FSTP open calls
- Discussion
