

[CEF Building Blocks: a success story](#)

The Connecting Europe Facility (CEF) in Telecom is a key EU instrument to facilitate cross-border interaction between public administrations, businesses and citizens, by deploying digital service infrastructures (DSIs) and broadband networks.

As we enter in the final year of this programme, we would like to spread the word about CEF Telecom and especially the Building Blocks for Digital Government and relevant success stories.

European Commission

Connecting Europe

Over the past years, the Building Blocks for Digital Government funded under the CEF Telecom programme have become very popular. As we enter the last year of the programme, the CEF Stakeholder Management Office reaches out to the user community to share the [success stories](#), which may inspire others to use the Building Blocks in their own work.

Therefore, we invite you to take a few minutes to:

- Surf to CEFDigital to find all the stories of successful implementation of our Building Blocks, and how they help Connect Europe. INSPIRE someone you know by sharing those with your contacts as well. You can also [link](#) to this short presentation.
- Let us know about new cases where our Building Blocks are being used or in the process of being implemented, especially when they benefit citizens, businesses and public administrations.

So if you know a good story, email [CEF Building Blocks](#) explaining in a few words what the story is and which Building Block was used and include in your email a contact person we might interview, and/or resources we might consult.
