

Cybersecurity of 5G networks - EU Toolbox of risk mitigating measures

The objectives of this toolbox are to identify a possible common set of measures which are able to mitigate the main cybersecurity risks of 5G networks, and to provide guidance for the selection of measures which should be prioritised in mitigation plans at national and at Union level. It does this in order to create a robust framework of measures with a view to ensure an adequate level of cybersecurity of 5G networks across the EU and coordinated approaches among Member States.
