

25 projects supporting the Graphene Flagship and the Human Brain Project are recommended for funding

FLAG-ERA, the network of regional and national research funding organisations in Europe, announced the list of projects it has recommended for funding. They were selected after the third Joint Transnational Call for projects to support the Graphene Flagship and the Human Brain Project.

FLAG-ERA

FLAG-ERA is the network of EU regional and national research funding organisations

The 25 research projects were selected by an independent international scientific evaluation panel supported by external reviewers. 16 of these projects will collaborate with the Graphene Flagship and nine with the Human Brain Project. These projects will be funded by a total budget of € 16.4 million and are expected to start between December 2019 and March 2020.

Consult the JTC2019 list of projects recommended for funding.

The European Commission is pleased to see the growing contribution of the Member States to the Human Brain Project and the Graphene Flagship through these selected projects and encourages FLAG-ERA to continue supporting the two Flagships in the coming years.
