

Call for Proposals for a Preparatory Action - Open Knowledge Technologies: Mapping and Validating Knowledge

- Opening: 28 September 2016

-

Closing: 14 November 2016

The aim of this preparatory action is to develop and demonstrate a European-wide learning and assessment technology system and networks to facilitate the up- and re-skilling of European citizens at risk of exclusion, in particular migrants, whilst empowering citizens to take more responsibilities for their own learning. The solution should deliver employability skills for the particular target group, by matching the interests and the current knowledge of these with the most demanded labour market skills and suggest possible learning roadmaps.
