

## The end of STORK 2.0: major achievements in making access to mobility in EU smarter

STORK 2.0, the pan-European Project fostering citizens' and business mobility in Europe through cross-border authentication and identification (eID) ended in September 2015.

The project started in 2012 and involved 55 organizations, both public and private, across 19 European countries. It has further built on the STORK framework for cross-border electronic identification and authentication (eID) of citizens and businesses in the EU and Associated Countries. STORK 2.0 allows citizens to identify themselves across-borders by using identity-related data from authentic and reliable sources (attribute providers) or to represent other natural or legal persons, in the context of different business domains.
