Broadband in Malta

Malta's broadband policy is technology neutral and favours a competitive market environment.

Summary of broadband development in Malta

Malta has already achieved the Digital Agenda for Europe (DAE) target of 100% broadband coverage with 30 Mbps. The DAE target for 50% of households with subscriptions over 100 Mbps by 2020 is the next target addressed in the Digital Malta Strategy 2014-2020.

National broadband strategy and policy

Responsible authorities

- The field of broadband development falls under the responsibility of the Office of the Prime Minister.
- The Malta Information Technology Agency is the central driver of information and communication technology policy, programmes and initiatives within Government.
- The national regulatory authority for electronic communications and spectrum management is the Malta Communications Authority (MCA). Through its Information Society arm, the MCA is implementing a number of demand stimulation measures aimed to increase take-up of superfast broadband services. This includes empowering people to have the skills and awareness about how the internet can be used, for example, to achieve a better quality of life, through to personalised information on eGov portals, e-commerce and internet banking and facilities for health and social care. In addition, the MCA has a number of initiatives with a particular focus on small and medium enterprises (SMEs) to support economic growth. This includes the promotion of cloud computing as a business innovator/enabler, mentoring, training and advice specifically targeted at the use of digitally-enabled technologies and other focused activities to support business growth, especially amongst SMEs.

Main aims for broadband development

Malta has published the Digital Malta Strategy 2014-2020. Priority activities for Malta are the further deployment of broadband infrastructure. Malta´s strategy aims at securing 100% coverage with 30 Mbps and 50% take-up rate for 100 Mbps by 2020. The implementation of this national policy includes technology neutrality and a competitive environment. Malta's digital strategy emphasises both supply and demand-side related aspects in network roll-out, the sharing of existing infrastructure, as well as the promotion of IPv6 as a preparation for the Internet of Things (IoT).

The new Malta Digital Strategy, encompassing the National Broadband Plan, is in preparation.

Data on broadband development and technologies in Malta

For the latest data on broadband coverage, subscriptions and penetrations, coverage of different broadband technologies and costs check the scoreboard reports and the country reports of the Digital Economy & Society Index (DESI).

Spectrum assignments for wireless broadband

For details on harmonised spectrum assignments consult the European 5G Observatory.

Digital connectivity and 5G rollout are among the ten strategic priorities of the Spain Digital 2025 Agenda.

Broadband in Slovenia

Slovenia's broadband aims are in line with the gigabit society targets.

Broadband in Slovakia

Slovakia has set the long-term objective of achieving access to high-speed internet connection with at least 30 Mbps for all households by the end of 2020.

Broadband in Romania

Romania's broadband plan focuses on building up a national broadband network as a first step towards achieving the targets set by the Digital Agenda for Europe.

Broadband in Portugal

Portugal's NGA coverage is slightly below EU average. The Agenda Portugal Digital aims at development of a digital infrastructure that allows citizens to take advantage of the new opportunities

offered by technologies.

Broadband in Poland

Poland's national broadband plan foresees that 100% of households should have access to internet connectivity of at least 30 Mbps by 2020. 50% of households should have internet connectivity of 100 Mbps by 2020.

Broadband in the Netherlands

The Dutch government supports the Gigabit Society targets. All households should have the opportunity to access broadband networks of at least 100 Mbps and a vast majority should be taking advantage of 1 Gbps by 2023. Mobile networks must also be able to access basic services at...

Broadband in Luxembourg

The development of a communication infrastructure with a target of gigabit broadband access throughout the country is one of the priorities in the governmental programme of Luxembourg.

Broadband in Lithuania

Lithuania's Next Generation Internet Access Development Plan focuses on direct state contribution to long-term infrastructure development, supports measures promoting private sector investments and seeks to foster an increase in demand for fast broadband access.

Broadband in Latvia

Broadband facilitates the development of e-services for government, schools, commerce, health and business besides providing high-speed internet to residents, businesses and public administrations in Latvia.

Broadband in Italy

The Italian strategy for next generation access network aims at developing a high-speed access network to maximise the take-up of an infrastructure able to guarantee services of 100 Mbps for at least 85% of households by 2020. Italy adopted a national state aid scheme to support...

Broadband in Ireland

The national broadband plan for Ireland foresees that by 2026 all premises in Ireland will have access to high-speed broadband.

Broadband in Hungary

Hungary's National Digitization Strategy 2021-2030 aims at 95% of households covered by gigabit networks by 2030.

Broadband in Greece

The Greek Digital Transformation Bible 2020-2025 highlights connectivity as one of the five strategic axes and acknowledges the Gigabit Society 2025 targets.

Broadband in Germany

The 2018 coalition agreement of the German Federal Government identifies the priority goal of a nationwide expansion of gigabit networks by 2025. The federal government has also developed a 5G Strategy for Germany.

Broadband in France

The national broadband programme France Très Haut Débit sets out the targets of fast broadband access for all households by 2022 and fibre for all by 2025.

Broadband in Finland

The Finnish authorities go for a competition-driven, fibre-based network roll-out assisted by public funds for underserved areas and advice for local municipalities on how to deploy broadband networks.

Broadband in Estonia

Estonia has established basic broadband coverage throughout the country, and has brought its broadband targets for 2020 in line with those of the Digital Agenda for Europe.

Broadband in Denmark

A number of political initiatives aiming at nation-wide fixed and mobile broadband coverage support Danish broadband goals. The Government works towards making Denmark a digital frontrunner by creating a foundation for Danish businesses to exploit digital technologies.

Broadband in the Czech Republic

The National Plan for the Development of Very High Capacity Networks, approved in March 2021,

defines the strategic approach of the Czech Republic to the construction of VHCN.

Broadband in Cyprus

Cyprus' broadband plan sets strategic objectives for 2016-2020 and is aligned with the Gigabit Society objectives and the 5G Action Plan. It aims at Internet coverage with at least 30 Mbps for all households and businesses by 2020. In order to achieve the 2020 take-up target of...

Broadband in Croatia

Croatia's strategy contains basic principles such as service and technological neutrality, net neutrality and inclusion of broadband internet access among universal services.

Broadband in Bulgaria

The National Broadband Infrastructure Plan for Next Generation Access "Connected Bulgaria" and the Policy in the field of electronic communications have been updated and adopted in August 2020.

Broadband in Belgium

Belgium's broadband strategy is incorporated into a broader policy strategy "Digital Belgium 2015-2020". The aim is to provide speeds of up to 1 Gbps to half of the country by 2020 and to facilitate a proactive 5G roll-out. By lowering costs and reducing administrative burdens...

Broadband in Austria

Austria's broadband strategy focuses on the nationwide supply of Gigabit connections by 2030. By the end of 2025, almost nationwide availability of 5G should have been realised.
