

Broadband in the Netherlands

The Dutch government supports the Gigabit Society targets. All households should have the opportunity to access broadband networks of at least 100 Mbps and a vast majority should be taking advantage of 1 Gbps by 2023. Mobile networks must also be able to access basic services at any time and from any location, therefore the government is planning to set coverage obligations into the upcoming frequency auctions.

Summary of broadband development in the Netherlands

The Dutch Digitalisation Strategy and the Connectivity Action Plan comply with the Gigabit Society targets. The Netherlands is one of the top ranking member states in terms of NGA coverage and aims to remain the European digital leader providing high-quality connectivity that serves a wide range of demands and is available at competitive prices anytime and everywhere. Currently, almost 98% of urban and rural areas in the Netherlands have been covered with NGA network (min. 30 Mbps).

National broadband strategy and policy

Responsible authorities

- In the Netherlands, several public authorities including local municipalities, regional provinces and on a national level, the Ministry of Economic Affairs and Climate Policy (Ministerie van Economische Zaken en Klimaat) are responsible for broadband development in the country.
- The Authority for Consumers and Markets (Autoriteit Consument & Markt) oversees fair

competition as well as consumer protection in the energy, telecommunication, transport and postal services sector.

Main aims for broadband development

In 2018, the Dutch Digitalisation Strategy was issued and states what is needed to get the Netherlands ready for the digital future. The challenge for the government is to speed up and support the digital transition in public sectors and to strengthen further privacy protection, cybersecurity, digital skills and fair competition.

The Connectivity Action Plan refines the objectives of the Dutch Digitalisation Strategy and outlines the government's efforts to remain the European digital leader with the aim of providing high-quality connectivity that can serve a wide range of demands and is available at competitive prices anytime and everywhere. In this plan, the Dutch government supports the EU Gigabit Society targets. All households should have the opportunity to access broadband networks of at least 100 Mbps and a vast majority should be taking advantage of 1 Gbps by 2023.

Main measures for broadband development

- The Dutch broadband strategy opts for a market-based infrastructure roll-out. It also puts key emphasis on the role of local and regional actors in coordinating and simplifying the process. Most of the broadband infrastructure roll-out is done by private operators autonomously. Here, removing barriers and facilitating the exchange of information and best practices among stakeholders are the principal tasks of local governments to stimulate investment by operators.
- State aid measures: Although there are no state aid measures foreseen on a national level, a number of regional authorities are investigating the possibilities of state aid measures. The national government supports these authorities in this and is working on a framework for state aid.

National and regional broadband financial instruments

- State Aid: Umbrella scheme is currently under development, which will make it easier for local authorities to provide financial support for construction. The submission of individual financial assistance schemes to the European Commission is thus no longer needed.

Data on broadband development and technologies in the Netherlands

For the latest data on broadband coverage, subscriptions and penetrations, coverage of different broadband technologies and costs check the scoreboard reports and the country reports of the Digital Economy & Society Index (DESI).

Spectrum assignments for wireless broadband

For details on harmonised spectrum assignments consult the European 5G Observatory.

WiFi4EU stories: an interview with the Mayor of Bissen, Luxembourg

The commune of Bissen, located in the canton of Mersch in central Luxembourg, has brought connectivity closer to its citizens by adhering to the WiFi4EU initiative. Following the steps of its capital city, Bissen wants people to benefit from the many opportunities brought about by digitalization, including having equal access to public information.

Digital Alps: Partnering with Broadband Competence Offices to build a digital connectivity roadmap for the Alpine Region

Mountain regions have much to gain from digitalisation and broadband connectivity. There is great potential for Smart Villages, SMEs, and access to online services in healthcare, education and much more. Mountain communities, however, face greater obstacles than most in becoming full participants in the European Union's Digital Decade. Their remoteness, in terms of distance and topography, combined with smaller populations, make them technically and financially challenging to reach with broadband infrastructure.

Rural connectivity for the health and management of beehives

In rural Latvia, an EU-funded start-up is using digital connectivity to promote healthy bee colonies and modern hive management. Thanks to €15,000 in LEADER funding covering two thirds of the total budget, Jānis Kronbergs developed the BeeKing app, which aims to help beekeepers – and especially newcomers – to learn from others, implement best practices and become more efficient. In this video, he explains the tool as well as its motivation, saying that “bees are very important for our nature, for pollination and biodiversity” and digital technologies can help beekeepers stay competitive.
