Supercomputing in the DIGITAL Europe programme

The DIGITAL Europe programme aims to build up and strengthen the EU’s supercomputing and data processing capacities, helping us to reach exascale supercomputing – computing with a power comparable to aggregating the computing capabilities of the mobile phones of the EU’s entire population – by 2022/2023. It aims to reach post-exascale capabilities by 2026/2027.

DIGITAL also intends to increase accessibility and broaden the use of supercomputing in areas of public interest such as health, environment, security, and industry, including small and medium-sized enterprises.
